DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warren et al. in view of Kunze-Folien internet catalog.

Warren discloses an electrical or electronic appliance comprising a housing 14 with wall parts and electrical and/or electronic components 24 mounted on a circuit board 18, the components are arranged therein and act as a heat source, wherein a thermally conductive mat 46 is inserted between the heat source 24 and an adjoining wall part 48 of the housing, which is made of metal, the mat 46 having a base body of simple sheet-like geometry, an underside of the base body being in contact with the outer metal wall of the appliance and a top side of the base body being in contact with the heat source 24 inside the appliance, the underside of the mat is smooth, while the top side has a height-compensating structure, the height-compensating structure comprises raised lamellae, the mat has a sticky surface, a film with a high degree of electrical insulation is additionally inserted between mat and adjoining wall (col.3, lines 53-57).

Warren discloses the claimed invention except specifying materials for the housing as being metal and plastic and the conductive mat is a modified hydrocarbon resin.

Kunze-Folien discloses the specific claimed materials for the mat, the materials for the housing can be either metal or combination of plastic and metal as it well known and widely used in the industry, therefore it would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the materials as claimed in the structure disclosed by Warren et al. for sufficient thermal conductivity between the heat generating component and the heat dissipating housing.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
